

ROC316A

Rock Box, Fanless Embedded System
User's Manual

Safety information

Electrical safety

- To prevent electrical shock hazard, disconnect the power cable from the electrical outlet before relocating the system.
- When adding or removing devices to or from the system, ensure that the power cables for the devices are unplugged before the signal cables are connected. If possible, disconnect all power cables from the existing system before you add a device.
- Before connecting or removing signal cables from the motherboard, ensure that all power cables are unplugged.
- Seek professional assistance before using an adapter or extension cord. These devices could interrupt the grounding circuit.
- Make sure that your power supply is set to the correct voltage in your area.
- If you are not sure about the voltage of the electrical outlet you are using, contact your local power company.
- If the power supply is broken, do not try to fix it by yourself. Contact a qualified service technician or your local distributor.

Operation safety

- Before installing the motherboard and adding devices on it, carefully read all the manuals that came with the package.
- Before using the product, make sure all cables are correctly connected and the power cables are not damaged. If you detect any damage, contact your dealer immediately.
- To avoid short circuits, keep paper clips, screws, and staples away from connectors, slots, sockets and circuitry.
- Avoid dust, humidity, and temperature extremes. Do not place the product in any area where it may become wet.
- Place the product on a stable surface.
- If you encounter any technical problems with the product, contact your local distributor.

Statement

Packing list

- ROC316A Fanless Embedded System**
- CD (Driver + User's Manual)**
- 12V 5A, 60W AC/DC Power Adapter w/o power cord (optional)**
- US / EU Power Cord (optional)**

Ordering information

Model Number	Description
ROC316A	Fanless Embedded System with Intel® Atom™ N2800 CPU onboard, DVI-I, Dual GbE LAN, Audio, 5 x COM, 5 x USB and 9V ~ 30V DC in

If any of the above items is damaged or missing, please contact your local distributor.

Chapter 1: Product Introduction

1.1 Key Features

System	
CPU	Intel® Atom™ N2800 1.86GHz onboard
Chipset	Intel® NM10
Memory	1 x 204 pin SO-DIMM DDR3 800/1066 up to 2GB
BIOS	AMI® BIOS
Expansion Slot	1 x Mini PCIe slot
Ethernet	2 x RTL8111E GbE LAN
Storage Device	1 x 2.5" SATA HDD/SSD drive bay 1 x external CFast socket
Front I/O	
USB Port	4
COM	4 x RS232 with 5V/12V selection
Power Button	Yes
Power LED	Yes
HDD LED	Yes
Audio	Mic in, Line out
Rear I/O	
DVI-I	1
Ethernet	2 x RJ45
USB	1
COM	1 x RS232/422/485 with 5V/12V selection
Antenna	Reserved two antenna holes
Power Input	9V ~ 30V DC in (By terminal block)
CF Socket	1
Mechanical & Environment	
Power Requirements	9V ~ 30V DC in
Dimension	230 x 195 x 51mm (L x W x H)
Construction	Aluminum chassis with fanless design
Operating Temp.	-20°C ~ +70°C
Storage Temp.	-40°C ~ +80°C
Relative Humidity	10% to 95% (Non-Condensing)
Certifications	CE, FCC

* Specifications are subject to change without notice*

The diagram shows a rectangular SATA connector with seven pins. Pin 1 is located at the top-left corner, marked with a small '1'. Pin 7 is located at the bottom-right corner, marked with a small '7'. The other five pins (2, 3, 4, 5, 6) are positioned in the middle row, with pin 2 on the far left and pin 6 on the far right.

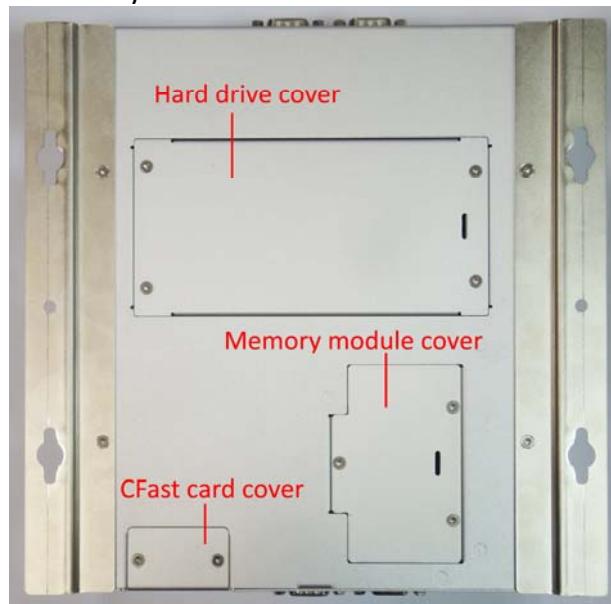

Chapter 3: Getting Started

This chapter provides more detailed information and let you know how to install components into the ROC316A Embedded System.

Prior to removing the chassis cover, make sure the unit's power is off and disconnected from the power sources to prevent electric shock or system damage.

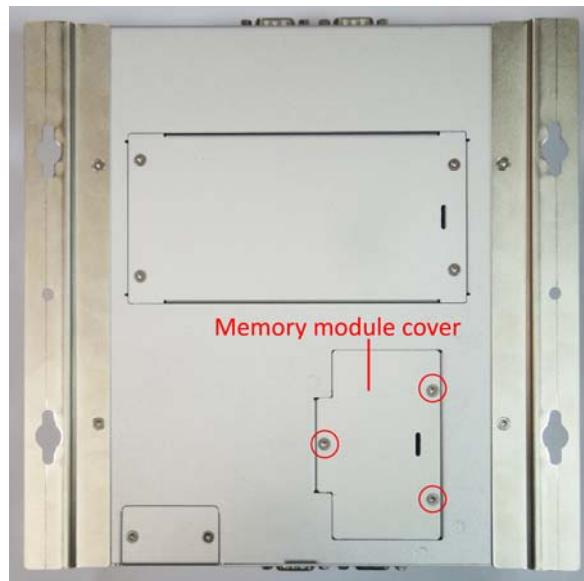

With the bottom side of the chassis facing up, there are 3 covers: hard drive cover, CFast card cover and memory module cover.

3.1 Installing System Memory

The ROC316A supports 1 x 204 pin SO-DIMM DDR3 800/1066 up to 2GB

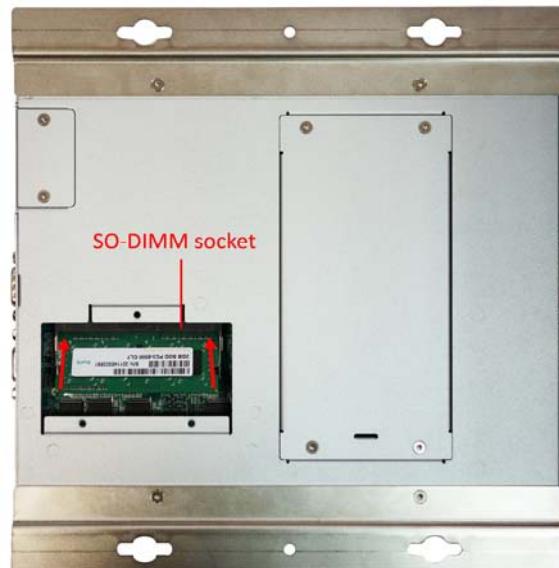

1. With the bottom side of the chassis facing up, remove 3 screws of memory module cover.

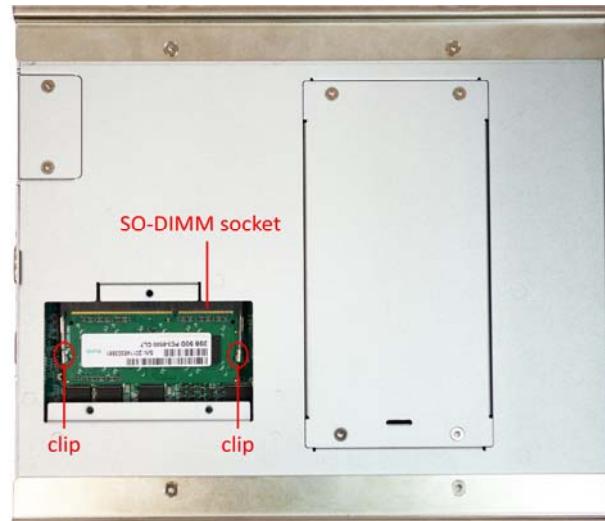

2. Take off the cover and locate the SO-DIMM socket on the board

3. Insert the module into the socket at an approximately 30 degrees angle. Apply firm even pressure to each end of the module until it slips into the socket. The gold-plated connector on the edge of the module will almost completely disappear inside the socket

4. Push the module down until the clips on both sides of the socket lock into position. You will hear a distinctive “click”, indicating the module is correctly locked into position

3.2 Installing a SATA Hard Drive

The ROC316A supports 1 x 2.5" SATA HDD/SSD

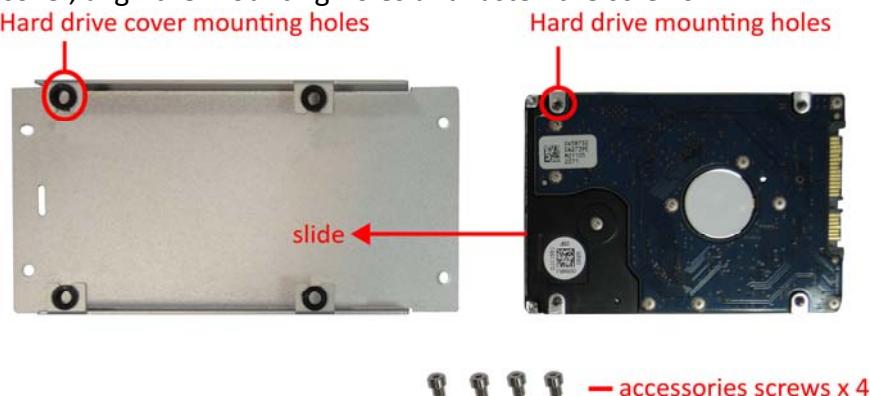

1. With the bottom side of the chassis facing up, remove 4 screws of SATA hard drive cover

2. Take off the cover. The cover is used to hold a SATA hard drive.

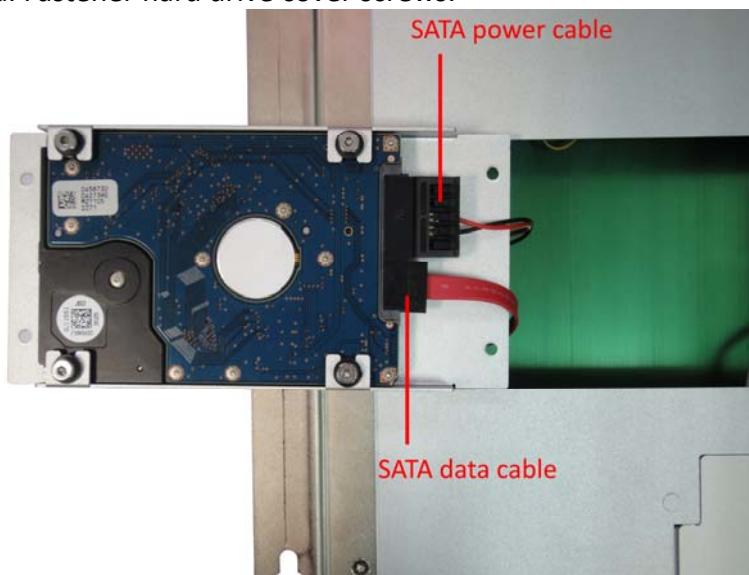

3. There are 4 screws in the accessory packet. Slide the hard drive into the hard drive cover, align the mounting holes and fasten the screws

align the mounting holes and fasten the screws

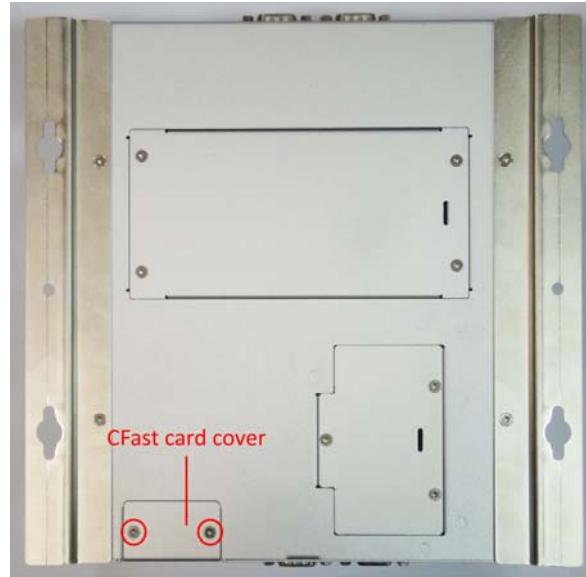

4. Connect SATA power cable and SATA signal cable. Make sure the cables are well connected. Fastener hard drive cover screws.

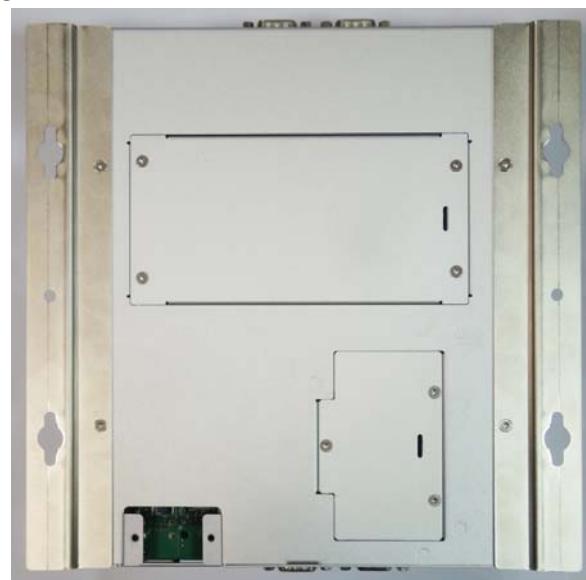

3.3 Installing a CFast Card

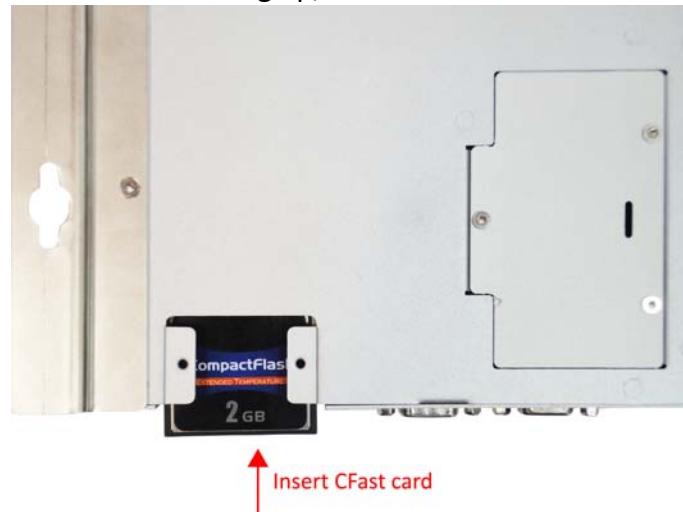

1. With the bottom side of the chassis facing up, remove 2 screws of CF card

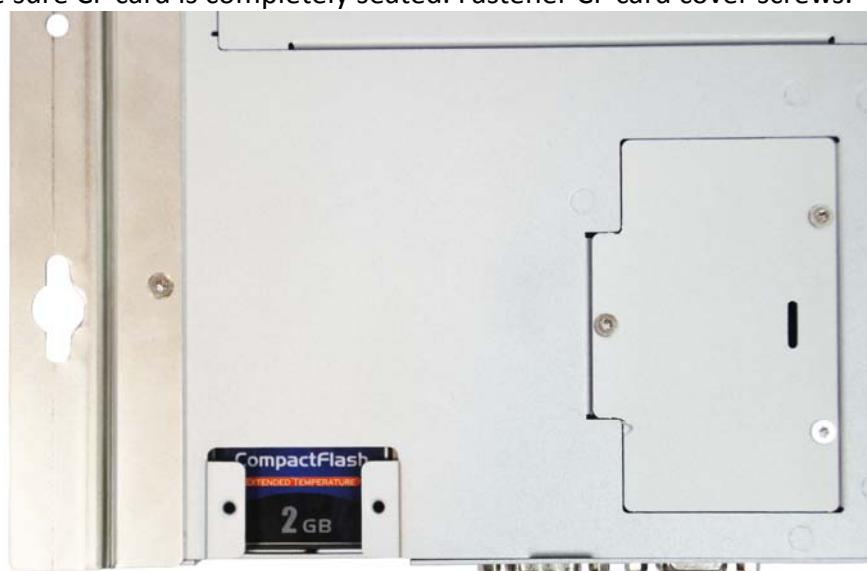

2. Take off the cover

3. With the CFast card's label facing up, insert the card into the socket.

4. Make sure CF card is completely seated. Fastener CF card cover screws.

Chapter 4: AMI BIOS UTILITY

This chapter provides users with detailed descriptions on how to set up a basic system configuration through the AMI BIOS setup utility.

4.1 Starting

To enter the setup screens, perform the following steps:

- Turn on the computer and press the key immediately.
- After the key is pressed, the main BIOS setup menu displays. Other setup screens can be accessed from the main BIOS setup menu, such as the Chipset and Power menus.

4.2 Navigation Keys

The BIOS setup/utility uses a key-based navigation system called hot keys. Most of the BIOS setup utility hot keys can be used at any time during the setup navigation process.

Some of the hot keys are <F1>, <F10>, <Enter>, <ESC>, and <Arrow> keys.

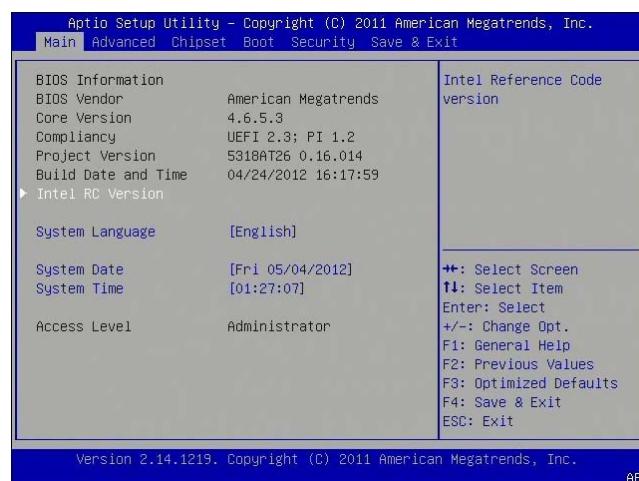

Some of the navigation keys may differ from one screen to another.

Left/Right	The Left and Right <Arrow> keys moves the cursor to select a menu.
Up/Down	The Up and Down <Arrow> keys moves the cursor to select a setup screen or sub-screen.
+– Plus/Minus	The Plus and Minus <Arrow> keys changes the field value of a particular setup setting.
Tab	The <Tab> key selects the setup fields.
F1	The <F1> key displays the General Help screen.
F10	The <F10> key saves any changes made and exits the BIOS setup utility.
Esc	The <Esc> key discards any changes made and exits the BIOS setup utility.
Enter	The <Enter> key displays a sub-screen or changes a selected or highlighted option in each menu.

4.3 Main Menu

The Main menu is the screen that first displays when BIOS Setup is entered, unless an error has occurred.

You could setup these items on the Main menu:

- System Language: Select this option to set the system language
- System Date: Select this option to set the system date.
- System Time: Select this option to set the system time.

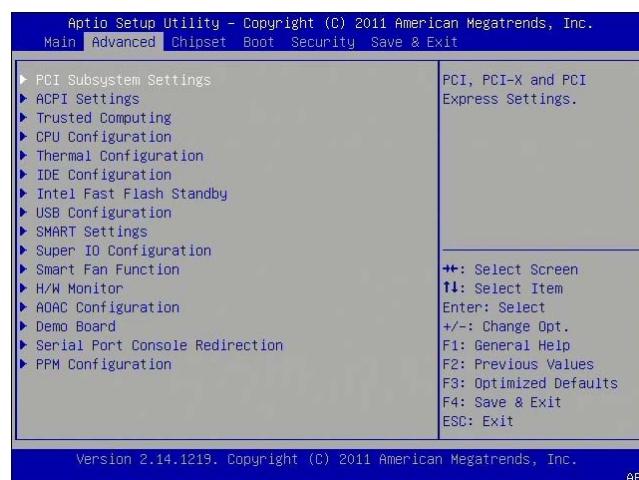

Use the <Arrow> keys to enter the appropriate time and date. Press the <Tab> key or the <Arrow> keys to move between fields. The date setting must be entered in MM/DD/YY format. The time setting is entered in HH:MM:SS format.

Access Level

Displays the access level of the current user in the BIOS.

4.4 Advanced Menu

This section allows you to configure and improve your system and allows you to set up some system features according to your preference.

4.4.1 PCI Subsystem Settings

This section allows you to configure the PCI, PCI-X and PCI Express settings.

PCI Latency Timer

Set this value to change the PCI Bus clocks. Default is 32 PCI Bus clock

VGA Palette Snoop

Set this value to enable or disable the VGA Palette snoop. Default is disable

PERR# Generation

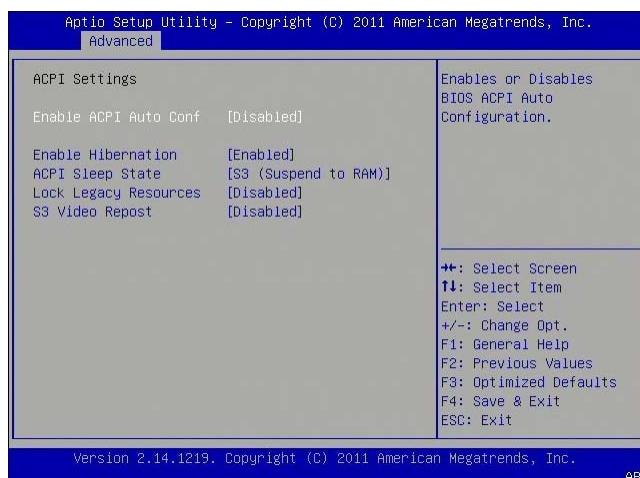

Set this value to enable or disable PERR# generation. Default is disable

SERR# Generation

Set this value to enable or disable SERR# generation. Default is disable

4.4.2 ACPI Settings

System ACPI Parameters.

Enable ACPI Auto Config

Enable/disable BIOS ACPI Auto Configuration. Default is Disable

ACPI Sleep State

Select the highest ACPI sleep state the system will enter when the SUSPEND button is Selected. The Default value is set as S3 (Suspend to RAM).

Lock Legacy Resources

Enables or Disables System Lock of Legacy Resources.

Options: Disabled (Default) / Enabled

S3 Video Reboot

Enable or disable S3 Video Reboot.

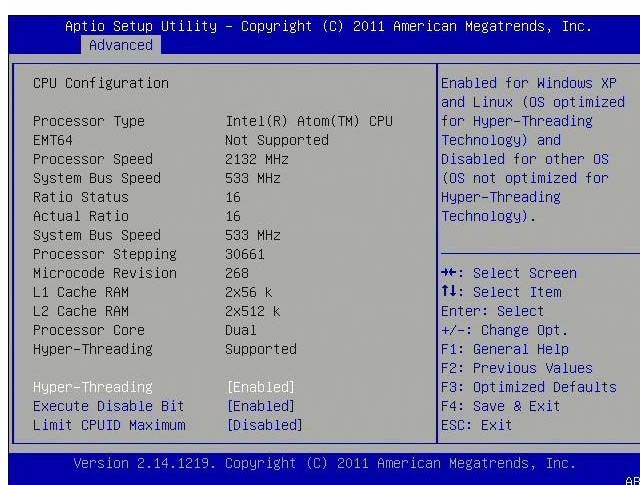

Options: Disabled (Default) / Enabled

4.4.3 Trusted Computing

This option allows the user to modify settings related to the optional Trusted Platform Module.

**4.4.4 CPU Configuration**

This option allows the user to view and configure the settings of the CPU installed on the computer system.

Processor Type

This option allows the user to view the information of the CPU installed on the hardware platform.

Processor Speed

This option allows the user to view the speed of the CPU installed on the hardware platform.

System Bus Speed

This option allows the user to view the Front Side Bus (FSB) speed of the CPU.

Processor Stepping

This option allows the user to view the stepping information of the CPU.

L2 Cache RAM

This option allows the user to view the amount of L2 Cache on the CPU.

Hyper-Threading

This option allows the user to enable or disable the HyperThreading™ support of the Intel® Pentium® 4 HT processor. By default this setting is enabled. This setting should be disabled in Microsoft™ Windows 2000 based systems.

Execute Disable Bit

XD can prevent certain classes of malicious buffer overflow attacks when combined with a supporting OS (Windows Server 2003 SP1, Windows XP SP2, SuSE Linux 9.2, RedHat Enterprise 3 Update 3.)

Limit CPUID Maximum

Disabled for Windows XP.

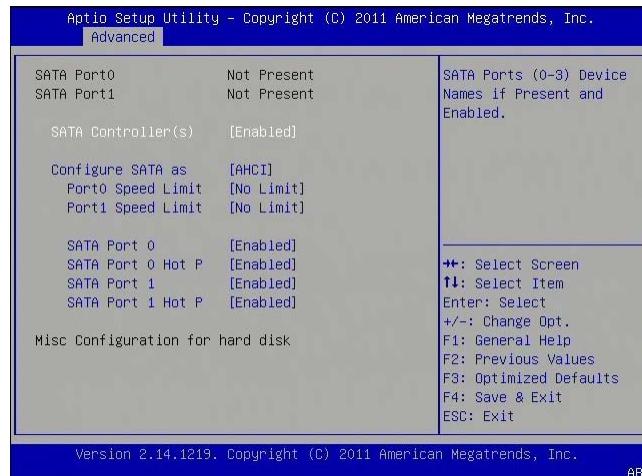

4.4.5 Thermal Configuration

This option allows the user to view and configure the settings of the CPU installed on the computer system.

4.4.6 IDE Configuration

You can use this option to select options for the IDE Configuration Settings.

SATA Controller(s)

This item allows users to enable or disable the SATA controller(s).

Configure SATA As

- | | |
|------|---|
| IDE | This is option configures the Serial ATA drives as Parallel ATA physical storage device. |
| RAID | This option allows you to create RAID or Intel Matrix Storage configuration on Serial ATA devices. |
| AHCI | This option configures the Serial ATA drives to use AHCI (Advanced Host Controller Interface). AHCI allows the storage driver to enable the advanced Serial ATA features which will increase storage performance. |

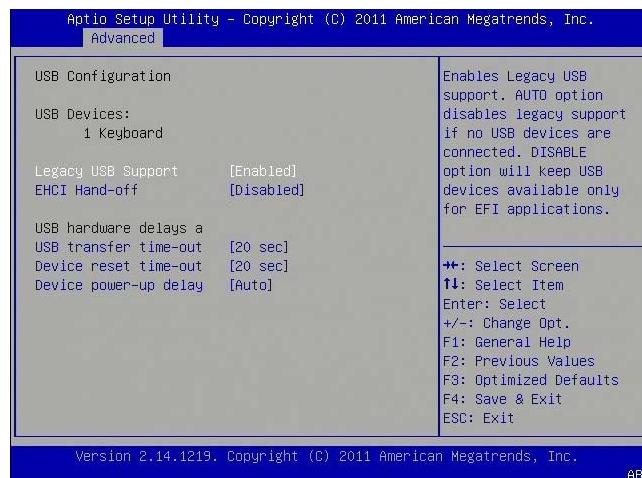

4.4.7 Intel Fast Flash Standby

This setting allows the user to enable or disable iFFS

4.4.8 USB Configuration

This option allows the user to view and configure the settings of the USB configuration parameters.

USB Devices

Legacy USB Support

This enables Legacy USB Support, the following tables outlines the different modes of this feature:

<u>Option</u>	<u>Description</u>
Auto	This option disables legacy support if no USB devices are connected
Enable	This option will enable Legacy USB support.
Disable	This option will keep USB devices available only for EFI applications.

Legacy USB Support

Enable the support for legacy USB. Auto option disables legacy support if no USB devices are connected.

EHCI Hand-off

This is a workaround feature for Operating Systems without EHCI hand-off support. The EHCI ownership must be claimed by EHCI Driver.

<u>Option</u>	<u>Description</u>
Enable	This option enables EHCI hand-off support.
Disable	This option disables EHCI hand-off support.

USB transfer time-out

Set the time-out value for Control, Bulk, and Interrupt transfers.

Device reset time-out

Set USB mass storage device Start Unit command time-out value.

Device power-up delay

Sets the maximum time the device will take before it properly reports itself to the Host Controller. 'Auto' uses a default value: for a Root port it is 100 ms, for a Hub port the delay is taken from the Hub descriptor.

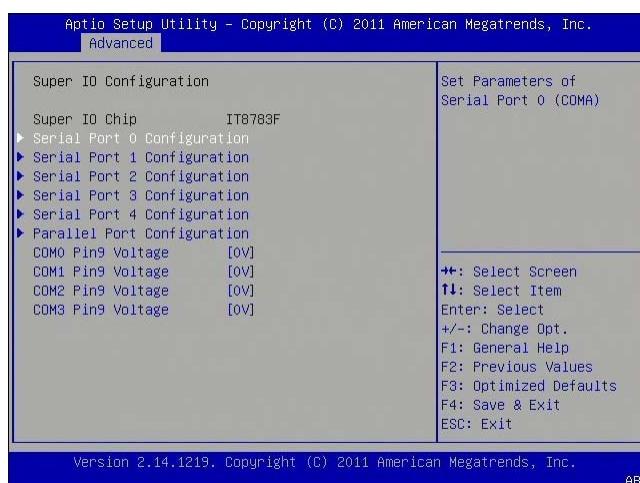

4.4.9 SMART Settings

SMART (Self-Monitoring, Analysis and Reporting Technology) is a monitoring system for computer hard disk drives to detect and report on various indicators of reliability, in the hope of anticipating failures. SMART failure messages might indicate the need to replace the storage device.

4.4.10 Super IO Configuration

Set Parameters of Serial Ports. User can Enable/Disable the serial port and Select an optimal settings for the Super IO Device.

Serial Port 0-4 Configuration

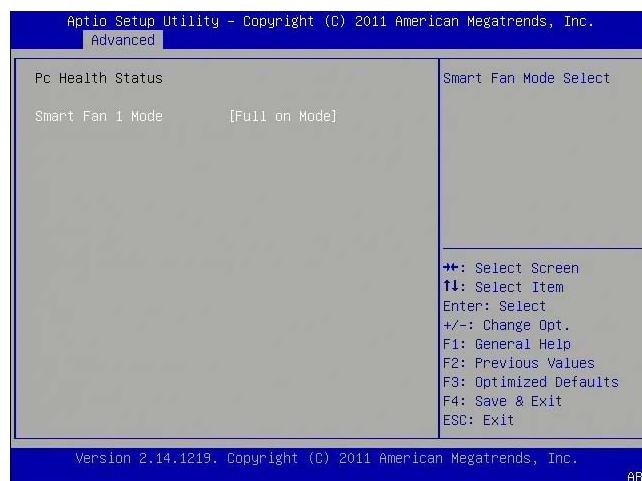

Use this item to enable or disable the onboard serial port.

Parallel Port configuration

Use this item to enable or disable the onboard parallel port.

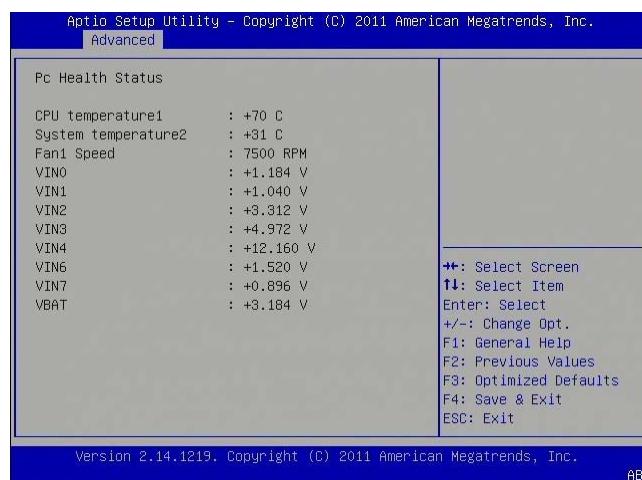

4.4.11 Smart Fan Function

Use this feature to control CPU/System Temperature vs. Fan speed. When enabling Smart Fan function, Fan speed is controlled automatically by CPU/System temperature. This function will protect CPU/System from overheat problem and maintain the system temperature at a safe level.

4.4.12 H/W Monitor

This section is used to monitor hardware status such as temperature, fan speed and voltages.

CPU Temperature

Detects and displays the current CPU temperature.

System Temperature

Detects and displays the current system temperature.

Fan1 Speed

Detects and displays the current CPU fan speed.

4.4.13 AOAC Configuration

This item allows users to enable or disabled AOAC function.

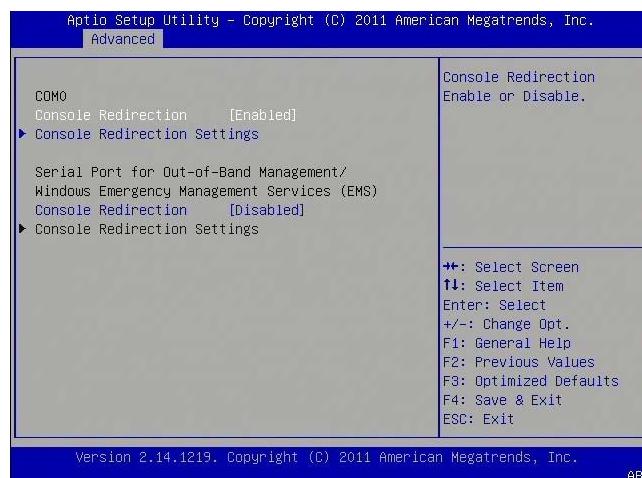

4.4.14 Demo Board

This item helps users for CRB test.

4.4.15 Serial Port Console Redirection

This setting allows the user to enable or disable console redirection

Console Redirection

Enabling or disabling of the serial port on the module is specified in the Advanced Configuration menu. Available option are: Disabled, Enabled

4.4.16 PPM Configuration

This item allows users to enable or disabled Intel SppedStep.

EIST

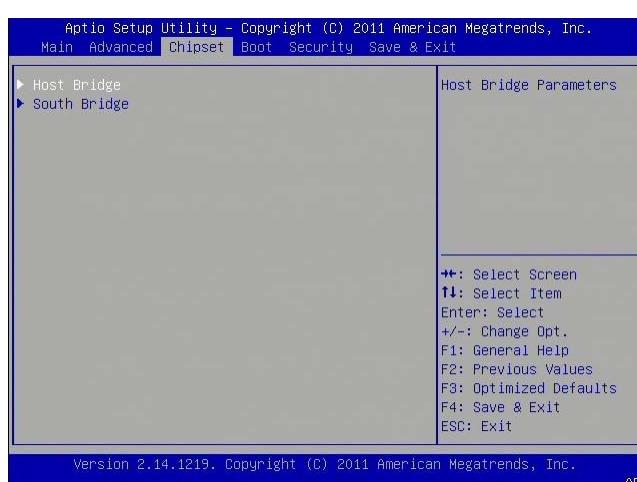

This item allows users to enable or disabled Intel SpeedStep function.

CPU C state Report

This item allows users to enable or disabled CPU C state report to OS.

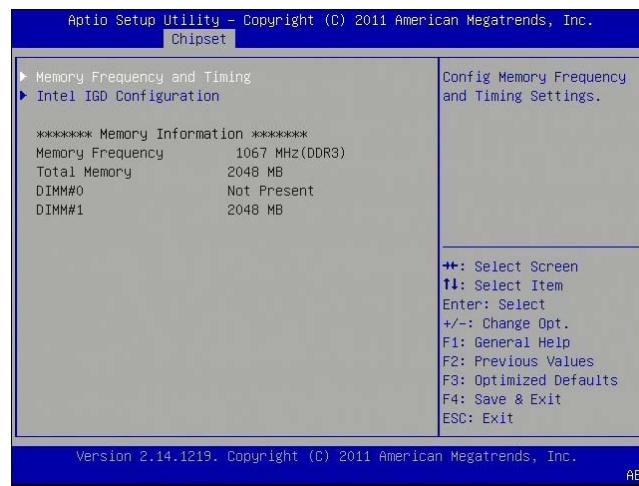

4.5 Chipset

This section allows you to configure and improve your system and allows you to set up some system features according to your preference.

Host Bridge

This section is used to configure the host bridge features.

Memory Frequency and Timing

Configures memory frequency and timing settings

Intel IGD Configuration

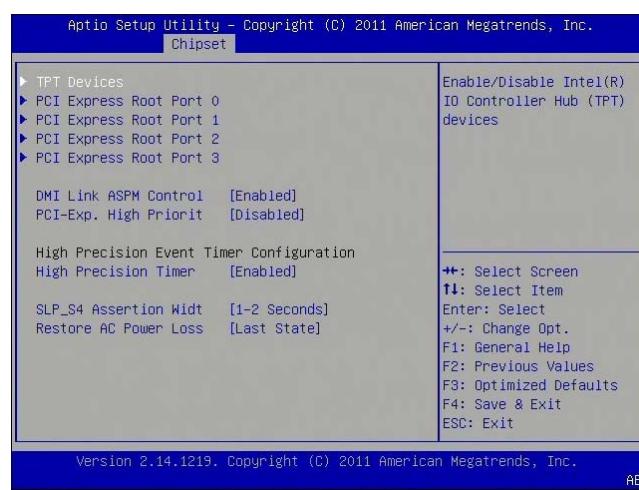

Configures the options for Intel IGD function.

Memory Information

Detects and displays information on the memory installed in the system.

South Bridge

This item shows the South Bridge Parameters.

High Precision Event Timer Configuration

Enable or Disable the High Precision Event Timer.

SLP_S4 Assertion Stretch Enable

Select a minimum assertion width of the SLP_S4# signal.

Restore AC Power Loss

Options are Power Off, Power On and Last State.

- | | |
|------------|--|
| Power Off | When power returns after an AC power failure, the system's power is off. You must press the power button to power-on the system. |
| Power On | When power returns after an AC power failure, the system will automatically power-on. |
| Last State | When power returns after an AC power failure, the system will return to the state where you left off before power failure occurs. If the system's power is off when AC power failure occurs, it will remain off when power returns. If the system's power is on when AC power failure occurs, the system will power-on when power returns. |

4.6 Boot Setting

Use this menu option to configure your boot settings

Setup Prompt Timeout

Selects the number of seconds to wait for the setup activation key.
65535(0xFFFF) denotes indefinite waiting.
